

# Student mobility

A project to facilitate and stimulate student exchange within The Netherlands.

The [zone Flexible education](#) of the Dutch [National Acceleration Plan Educational Innovation with ICT](#) started this project together with SURF with the aim to create a joint ecosystem, where there is vibrant student exchange on individual courses between the institutions.

A pilot will take place within the alliance of TU/e, WUR, UU, and UMCU where the institutions will use each other's expertise, not only by (creating) joint education, but also by making each other's courses and challenges accessible for all our students.

## Current issues that hamper student exchange

- Education is time and place dependent;
- Differences in course information that is provided;
- Our Student Information Systems (SISs) are not connected;
- Rules and regulations concerning application, exams, re-sits, etc. differ per institute.

## Aims of this project

- Redesign courses to make them (more) time- and place-independent;
- Make one website/portal which provides all necessary course information;
- Develop a new architecture to exchange SIS data, with the student in control of its data;
- Strive for common rules, clearly communicate on differences.

## Three (sub)projects

1. Course portfolio (project coordinators from the three institutions in lead):
  - Create an attractive portfolio (+/- 15 courses);
  - Redesign courses;
  - Solve policy and administrative issues.
2. Infrastructure (SURF in lead):
  - Create platform (website) where student can see the course offerings of the involved institutes;
  - A digital EduID through which the student can enroll for courses and can be identified;
  - A system that allows the exchange of the required information under the authorisation of the student;
  - A connection between the SIS of the three institutes to exchange the required information.
3. Implementation, dissemination, and evaluation (review group in lead).

## Timeline

- Until September 2021: Creating course portfolio, redesigning courses and building the required infrastructure.
- 2021/2022: Start pilot.
- From 2022 onwards: Scale-up (as well national).

## Funding

This project is financed by both the Acceleration Plan and the alliance of TU/e, WUR, UU, and UMCU.
